HIGH POWER THYRISTOR

INVERTER GRADE THYRISTOR

Hockey Puk Version K-PUK SERIES 1350PK

Type :1350 PK140 F To 1350 PK 210 F

Features

- Low Switching loss at high frequency.
- 60 μ s maximum turn-off time with feedback diode.
- Involute, interdigitate gate

Typical Applications

- Inverters
- Choppers
- Induction heating
- All type of forced-Commutated converters

1350A

Case Style A- 24 (K-PUK)

Major Ratings and Characteristics :-

OUTLINE DRAWING

SUGGESTED MOUNTING METHODS FOR PRESS-PAKS TO HEAT DISSIPATORS

To achieve a reliable and low thermal resistance interface when the press pak is assembled to a heat sink the following general instructions should be followed.

1. Check each mating surface for nicks, scratches, flatness and surface finish. The heat dissipator mating surfaces should be flat with .0005 inches and have a surface finish of 63 micro-inches.
2. It is recommended that the heat dissipator be plated with nickel or tin. Bare aluminum or copper surfaces will oxidize in time resulting in excessively high thermal resistance.
3. Sand each surface lightly with 600 grit paper just prior to assembly. Clean off and apply silicone grease (GE G623 or Dow Corning DC3, 4, 340 or 640). Clean off and apply again as a thin film. (A thick film will adversely affect the electrical and thermal resistance(s)).
4. Assemble with the specified mounting force applied through a self-leveling, swivel connection. The force has to be evenly distributed over the full area. Center holes on both top and bottom of the press-puk are for locating purposes only.
